MONOLITH · SOLANA HACKATHON 2025

BITE SEEKER

Any recipe.
Paid for with **SKR**.

10	1K	50%	3
SKR per extraction	SKR = Pro forever	of fees burned	languages — EN FR AR

THE PROBLEM

Five apps to cook dinner.

Recipes live in bookmarks. Shopping lists live in a different app. Meal plans are spreadsheets. Pantry tracking doesn't exist.

Nothing connects what you *have* to what you can *cook* to what you need to *buy*.

FOR EVERY HOME COOK

- Saved links die in browser bookmarks
- YouTube videos can't be searched by ingredient
- Cookbook recipes buried in camera rolls
- No single tool closes the loop

FOR SEEKER DEVICE HOLDERS

Zero consumer apps on Solana Mobile serve everyday, non-financial needs. The kind of app you open before every meal.

One app. The whole loop.

FEATURE	WHAT IT DOES
Extract	Paste a URL, YouTube link, or snap a cookbook page — Gemini parses it into a full structured recipe in 20–40 seconds
Pantry	Track what you have at home. Add manually or photograph your fridge — AI identifies every ingredient
What Can I Make?	Matches your pantry against your recipe library. Shows ingredient match percentage and what's missing
Meal Plan	Place recipes onto a weekly calendar — breakfast, lunch, dinner, snack — for any day of the week
Shopping List	Auto-generated from your meal plan. Works offline. Checkable in-store.
Pro (SKR)	**Hold 1,000 SKR → unlimited extractions, forever. No subscription. No billing. Just hold.**

SEEKER-NATIVE

SKR is not bolted on. It is the business model.

Holding SKR literally unlocks the app. That is a native reason to acquire and hold the Seeker community token — not just trade it.

FREE USER

Tap Extract Recipe
↓
Wallet opens via MWA
↓
Sign 10 SKR → treasury
↓
Recipe extracted & saved

PRO USER · 1,000+ SKR

Tap Extract Recipe
↓
Balance checked on-chain
↓
1,000+ SKR held — FREE
↓
Recipe extracted & saved

- Auth via Mobile Wallet Adapter — no email, no password
- `TransferChecked` instruction · verified on-chain · replay-protected
- `getTokenAccountsByOwner` live balance check per session
- 50% of all SKR collected is burned — supply reduces with every use

USER EXPERIENCE

Built for a kitchen, not a laptop.

Every screen is a bottom sheet, swipe gesture, or full-bleed card. There is no hamburger menu. There is no desktop layout squeezed onto a phone.

Wallet auth

Replaces the login form. One tap. Sign with Phantom. No email. No password. No account creation.

Camera extraction

Snap up to 3 photos of a cookbook page. AI reads ingredients, quantities, and steps — including handwritten recipes.

Offline-resilient

Zustand + SecureStore keep the full pantry and shopping list accessible with no signal — useful in actual supermarkets.

RTL + i18n

Full support for English, French, and Arabic with forced RTL layout. Recipes extracted in the user's own language.

No web version. No PWA. No Electron wrapper. MWA requires a physical Android device — this is not portable to a browser.

Wallet to shopping list in under two minutes.

1. Open app → Phantom wallet prompt → sign nonce → **authenticated**. No form. No email. One tap.
2. Paste `youtube.com/watch?v=...` → tap **Grab Recipe** → wallet opens for payment.
3. Sign the 10 SKR transfer → backend verifies on-chain via `getTransaction` → **extraction job starts**.
4. 20–40 seconds → full structured recipe: title, ingredients with quantities, steps, prep and cook time, difficulty.
5. Drop recipe onto **Tuesday's dinner slot** in the weekly meal plan.
6. Tap **Generate Shopping List** → every missing ingredient, grouped by category, checkable in-store.

No off-chain oracle. No App Store billing. No oracle. Every critical check happens on-chain.

MOBILE — ANDROID APK

Runtime	Expo SDK 55 · React Native 0.83
Navigation	Expo Router — file-based, deep links
State	Zustand 5 · SecureStore persistence
Wallet	Mobile Wallet Adapter v2
Payments	**SPL TransferChecked instruction**
Balance	**getTokenAccountsByOwner · 5-min cache**

BACKEND — GO

API	Chi v5 · Postgres · Redis
Auth	Ed25519 nonce sign → JWT
AI	Google Gemini — URL, video, image
Payment verify	**getTransaction · postTokenBalances**
Pro check	**getTokenAccountsByOwner · live per session**
Replay guard	txSignatures stored in Postgres

TOKEN

SEEKER (SKR)

`SKRbvo6Gf7GondiT3BbTfuRDPqLWei4j2Qy2NPGZhW3`

- Classic SPL · 6 decimals
- 10 SKR → extraction
- 50% burned per tx
- 1,000 SKR → Pro

RETENTION

People open recipe apps before every meal.

This is not a DeFi dashboard opened once a month. This is a tool with a genuine daily use case that accumulates switching cost over time.

BEHAVIOUR	FREQUENCY
Look up a recipe	Daily
Check pantry before shopping	2–3× per week
Build a meal plan	Weekly
Use shopping list in-store	Weekly

WHY USERS DON'T LEAVE

— Pantry data accumulates — the longer you use it, the more it knows

— Meal plan history improves recipe suggestions over time

— Pro is permanent while you hold SKR — there is no renewal, no churn

ELIGIBILITY

Started from zero for this hackathon.

No prior codebase. No outside capital. The app does not exist as a web version, a PWA, or an Electron wrapper.

- ✓ Project started within the 3-month eligibility window
- ✓ No outside capital raised
- ✓ Android APK produced via EAS Build — `buildType: "apk"`
- ✓ MWA requires a physical Android device — the wallet flow is impossible in a browser
- ✓ Camera extraction via `expo-image-picker` — a mobile sensor, not a web API
- ✓ Biometric auth via `expo-local-authentication` — device hardware
- ✓ JWT and wallet address encrypted on-device via `expo-secure-store`
- ✓ Edge-to-edge layout, safe area insets, Android back gesture handling
- ✓ Offline banner and push notifications — mobile OS primitives
- ✓ **No web version. No PWA. No Electron wrapper.**

The app becomes a platform. Chefs earn. Holders benefit.

Every SKR earned by a creator is paid by a user — no platform cut, no middleman. The protocol is the business model.

NOW → MONTH 1

Ship & distribute

- Solana dApp Store listing
- Public recipe sharing — any user can publish an extracted recipe
- SKR Pro tier visible in Seeker wallet aggregators

MONTH 2–3

Creator accounts

- Verified chef profiles — link wallet, set creator handle
- Publish gated recipe packs: free tier previews, full content behind SKR paywall
- Save-to-earn: every time a user saves a creator's recipe, creator earns a micro SKR cut
- SKR-weighted community ranking — top recipes rise by holder votes

MONTH 4–6

Monetisation layer

- Creator SKR subscriptions — fans pay monthly in SKR for exclusive drops
- Tip in SKR directly from any recipe card — one tap, MWA signs
- Co-authored recipes — split royalties on-chain, no escrow, no trust
- 50% burn on all creator tx fees — every creator sale reduces SKR supply

LONG TERM

Full marketplace

- Creator storefronts: meal plans, diet programs, full cookbooks — priced in SKR
- Brand sponsorships settled on-chain — ingredient sponsors pay creators in SKR
- Grocery delivery API: shopping list → cart in one tap, affiliate revenue in SKR
- Seeker device NFC → instant pantry scan at checkout

Every creator transaction burns 50% of the SKR fee — the bigger the creator economy grows, the faster the supply contracts.

50%
burned on every creator tx

0%
platform cut — SKR only

A student and a senior dev. One hackathon. One app.

This is not a team of full-time founders with runway. It is a student learning to build on Solana, with just enough senior support on the infrastructure that would have blocked him.

Every screen in the demo was designed and built by someone submitting their first app to their first hackathon. That is the Seeker community.

Faycal

MOBILE · REACT NATIVE · EXPO · UI/UX · FRANCE

- CS student. First hackathon. First shipped app.
- Built every screen, every animation, every user flow
- Wallet auth, SKR payment, pantry, meal plan, shopping, i18n, dark theme, camera UI
- Learned MWA and SPL token mechanics from scratch during this sprint

> *"I wanted my first app to mean something to a real community. The Seeker ecosystem felt like the right place to start."*

Naoufal

BACKEND · GO · POSTGRES · SOLANA RPC · DEVOPS

- Senior software engineer — nights and weekends only
- Go REST API, Ed25519 wallet auth, Solana RPC payment verification
- Gemini AI extraction pipeline, multi-platform deployment, all infrastructure
- On-chain payment verification and balance checks are production-grade and replay-protected

THE ASK

Not a dashboard.
Not a DEX.
A recipe app.

Where your SKR holdings replace your Netflix subscription —
except the value stays on-chain, and you own it.

10 SKR	50%	1K SKR
per extraction	burned forever	= Pro, permanently

Bite Seeker. Your kitchen, on-chain.
